5 Year LED Warranty

HELLA Mining products are covered by a one (1) year warranty which covers faults in material or workmanship only and provided that the product is used for its intended purpose except for globes, ballasts, fuses and sealed beams, which are on fitment. All HELLA Mining LED products are covered by a five (5) year warranty on light output, excluding environmental and physical damage.

ABOUT HELLA MINING

The HELLA Mining Centre of Excellence was created in Australia in 2002 to design, develop and manufacture fixed and mobile lighting products specifically for the mining industry. HELLA uses its research, engineering and logistic expertise to produce lighting products that are designed to world class standards that can be used in mining applications all over the world.

The research behind the product selection is based upon data collected from mining equipment in use in many different regions and applications. This data was utilised to set performance parameters as a baseline criteria for survival in a mining application. These parameters are used in testing our products in house before we can be confident to release them to mining field trials and later for general release to the mining industry. This process is vastly different to most of our competitors that will pass on products designed for other target segments and “offered for trial” to mining companies with little idea of the outcome.

The product sale is also very different to our competitors as only HELLA Mining offer mining companies a free of charge engineered application service. This service offers the end user information on the product, aiming angles and actual lighting performance prior to any purchase that includes safety as a key area of concern. This service highlights to the customer that HELLA Mining are the mining professionals for lighting and assists our customers with another value proposition to their mining purchase.

An area of concern to mining companies with global shareholders is safety and environment. Any negative concerns from ongoing environmental or safety issues can clearly affect the share price of these multinational firms and therefore there is a major focus on HSE (Health, Safety and the Environment). HELLA Mining has advanced lighting technology that meets the criteria for enhanced safety as vision plays a vital part in an environment that operates 24 hours a day and has large mobile machinery capable of destruction on a grand scale and a highly mobile road network.

HELLA Mining products meet the needs of mining companies around the world. The concept of “Technology with Vision” highlights the fact that we exceed our customer’s expectations by producing quality products that fulfill the requirements for the harshest industry on earth in an efficient, advanced and professional manner that offers real technology with vision.

HELLA Australia is equipped with highly advanced production and distribution facilities. HELLA Australia has full design and development facilities that include: NATA registered Photometric Laboratory, Chemical Analysis Laboratory

Facilities, and some of the most advanced environmental and physical test simulation facilities available anywhere.

HELLA continues to develop, prove and market innovative products based on worldwide leadership in advanced lighting technology – to demonstrably improve end user profitability in mining applications. This is achieved through products that offer:

- **Greater safety**
- **Lower operating cost**
- **Greater productivity**
- **Predictable service**
- **Better value**

HELLA Mining products are backed by the renowned global HELLA quality guarantee, and service and distribution network.

Statement of Warranty

HELLA Mining products are covered by a one (1) year warranty which covers faults in material or workmanship only and provided that the product is used for its intended purpose except for globes, ballasts, fuses and sealed beams, which are on fitment. All HELLA Mining LED products are covered by a five (5) year warranty on light output, excluding environmental and physical damage.

Important Note

Only products specifically identified as ECE or SAE compliant are approved for use on public roads, when installed and operated as required by local regulation on approved vehicles. The responsibility for correct selection, fitment and operation to meet local regulations is that of the vehicle operator. Please ensure local regulations and requirements are met.

Project Argon: Charting the extremes:

Developing lighting equipment to go the distance in mines requires a deep understanding of their operating systems and specific environmental conditions.

At HELLA, we don’t guess, we measure.

HELLA Australia’s PROJECT ARGON collects and researches detailed data from a diverse range of mines and machines. A suite of robust sensors with integrated data loggers is mounted on mining plant and machines to record operating conditions. After the sensors are recovered from the machines, their data is downloaded for analysis and used as the basis of product design and test specifications able to match extreme mining environments.

APPLICATIONS ENGINEERING

The HELLA Centre of Excellence – Mining provides an Applications Engineering lighting design service for HELLA Mining customers. The aim of this unique service is to reduce risk to end users and OEMs of implementing an inappropriate lighting design, enabling all stakeholders to evaluate, comment and positively input into the design prior to implementation.

The HELLA team combines decades of lighting expertise across many countries and industries with the most sophisticated software. However, our most valuable asset is ongoing consultation combined with extensive practical on-site mining experience, enabling us to understand the unique visual and environmental requirements of the mining industry.

We are fully aware of the wide and sometimes conflicting range of operational requirements, covering the need for greater equipment, operator and maintenance personnel safety, lowered cost of ownership and maintenance, increased productivity requirements and the need for a predictable service life.

We use appropriate, proven technologies and methods to provide the mining operation with an engineering-based, application-focused, customised solution. The system design not only complies with the relevant occupational health and safety regulations, but also with real life maintenance and operational needs.

HELLA lighting designs typically include; aiming and orientation angles, number and type of luminaires, part numbers, spare parts, illumination level achieved and appropriate standards referenced. Our service extends to both fixed and mobile plant lighting designs. The final design is contained in a clear and concise document that can be presented to all relevant stakeholders, ready to be integrated into on-site maintenance documentation systems.

Our experience in Applications Engineering allows us to create lighting designs in a short time frame and with limited information.

On the following pages you will find light simulations for LED lighting upgrades.

QUALITY STANDARDS

HELLA has set itself the ambitious standard of guaranteeing consistently high product quality in every respect.

This is achieved by defining quality criteria and checking every detail using carefully-selected methods throughout the entire manufacturing process. Production quality is ensured by parallel quality monitoring and testing. Quality products from HELLA are subject to different test procedures in accordance with the HELLA standard 67101. These test procedures are conducted by the HELLA test laboratory in Germany.

First-class quality by conviction: HELLA guarantees the perfect, long-term functioning of its products and stands for satisfied customers in the spare parts, accessories and light sources areas. As the long-established company from Lippstadt is an efficient partner to the automotive industry, HELLA products are manufactured to meet the respective precision, tolerance specifications. Combined with the use of sophisticated test procedures in the product development, you can depend on HELLA products in any situation.

HELLA products are subjected to the following tests:

Heat, moisture and cold test

In temperature cycle tests, HELLA products are exposed to temperature fluctuations from -40 degrees Celsius to +100 degrees Celsius in climatic chambers which have a volume of 600 – 1,000 liters. In addition, condensation and defogging tests are carried out up to max. 95 % air humidity and up to 80 degrees Celsius. In the so-called „shock chamber“, the temperatures changes within seconds (intervals of max. 6 seconds) between -40 degrees Celsius and +100 degrees Celsius. These tests signify utmost stress on any material, both for lighting as well as for the individual electronics components. The heat and cold tests last up to 48 hours.

Dust test

In this test, the products are tested for their dust tightness. Unfired Portland cement is used as a test medium for all products. The test is optionally performed in sample function operation, and with overpressure or under pressure exposure of the device under test.

The tests are evaluated by determining the photometric value before and after the test (IP 6KX). This is the only way that HELLA can ensure that dust will not penetrate the product and can guarantee the long service life of the product.

High-pressure cleaner test

In one test system, the products are exposed to a water pressure of up to 120 bar and a water temperature of +85 degrees Celsius. This test simulates cleaning in a carwash or with a pressure cleaner (IP X9K)

Immersion and pressure tightness test

Depending on requirements, this test is carried out for all lighting technology products. An immersion pipe can be submerged to a depth of 1m in water. Another test system can reach a depth of 6 meters. Also, an overpressure test up to 1.6 bar is conducted in an immersion pool. All tests are carried out in accordance with the HELLA standard, 67101, as well as the legal requirements (IP X7).

Vibration test

This test simulates the behavior of the products over a "poor stretch of road" and shows, for example, reactions to potholes, gravel tracks, gravel, stones, fields and dirt roads. Special rally profiles are tested for selected products, such as auxiliary driving lights. The wide band random vibration test is used to test the mechanical endurance strength in the vertical and horizontal axes. Here, the frequency range extends from 10 to 1000 Hertz. Alongside the vibration test, the products are subjected to a temperature overload of -40 degrees Celsius to +80 degrees Celsius. This includes a check on the ageing process of the plastic. All products are tested for function for up to 24 hours. A mechanical shock test is also carried out as part of testing and is designed to simulate behavior on impact (for example, boxed products during shipping) at an acceleration of 300 to 500 meters per second squared.

Shock test

HELLA Mining products must pass the HELLA 200 G shock test before being certified for use in mining applications. Products are put through 10,000 cycles at 200 G in various orientations to fully test their resistance to shock and vibration.

Lumen measurement according to LM-79-08

Currently there is no universally recognised standard for measuring the photometric properties of solid state (LED) lighting. This has resulted in many manufacturers and resellers using theoretical data (e.g. Raw lumens) which offers no actual useful comparison data for the purchaser, who is either unaware or unable to calculate the actual light output taking into account optical, electrical and thermal losses. The IES (illumination Engineers Society) released in 2008 a standard for testing amongst other things, the total luminous flux of LED fixtures. This publication appears to be the front runner in becoming the benchmark standard in testing solid state luminaire photometric, and has been adopted by most top tier manufacturers, including HELLA Mining. In simple terms, the test will determine the effective light output of a Luminaire, ideally using specialised photometric equipment in a NATA accredited laboratory. For the purpose of this comparison, only data obtained using the LM-79-08 standard is utilised.

FEATURES HELLA MINING WORKLIGHTS

Lumen measurement according to LM-79-08

The correct way to measure the light output of head- and worklights is usage of a Goniometer. This instrument measures defined sphere angles, normally 90 degree in all directions (a half sphere). As a result we get the nominal illumination values of all detected section angles. With our software "Helios" we analyse the measured values and generate the correct lumen output. All measurements are performed at an ambient temperature of 23°C. The light output is measured after thermal stabilisation time of the light unit after 30 minutes in function, the LEDs have then reached their operating temperature.

NanoSafe

HELLA Mining presents the new extreme corrosion resistant worklights with a special coating to improve the resistance of our Mining worklights in harsh conditions. We call this new technology: NanoSafe technology. For our NanoSafe coating, we implemented three more layers to make our worklights more corrosion resistant and implemented a non-stick and easy to clean surface coating. These three additional layers lead to a much higher and longer resistance against corrosion. The NanoSafe technology will be exclusive to our Mining LED worklights, where the conditions are extremely harsh.

RFCommSafe™ Electromagnetic Compatibility (EMC)

Every LED lamp contains electronic circuitry. It is essential that this circuitry does not cause harmful interference to other devices and at the same time is not susceptible to radiation from other devices.

RFCommSafe™ products were developed in recognition that some radio communication equipment can self-tune to be very sensitive in remote areas. In these situations the limits prescribed by regulatory requirements and as defined in international standards such as CISPR15 or relevant UNECE Standards may not be sufficient to ensure there is no interference with very sensitive radio communication equipment.

Lamps marketed as RFCommSafe™ are designed to go well beyond the requirements of CISPR15, CISPR25 and UNECE Standards.

HypaLUME

This LED product has the following features

High Bay Version

HypaLUME

- Developed specifically for Mining applications
- Highly efficient light distribution
- Suitable for energy saving lighting installations

Light output (measured): 24,000 lumen, power requirement: 240 Watt, colour temperature: 5,700° Kelvin, Multivolt™, reverse polarity protection, transient spike circuit protection, over-voltage protection, thermal management, IP 6K9K / IP 6K7 (high pressure cleaning resistant / submersible), double insulated silicone supply cable with DT Connector, non-stick and easy to clean surface coating, high impact grilamid nylon lens, Heavy Duty cable gland offers bend protection, RCM compliance, premium aluminium housing for mining use, 10 G / 50 G Heavy Duty stainless steel bracket, mounting standing / hanging.

Mounting example:
LED Mine Spec Signal Bar Kit with roof rack kit
and with 2 pieces RokLUME™ 140 mounted on it.

LED Mine Spec Signal Bar

Low profile LED Mine Spec Signal Bar, specifically designed for mining industry light vehicles. It is designed to be an all-in-one solution for service vehicles and has a contoured design to suit a vehicle roof line with a low physical footprint.

This new product offers a solution to replace multiple products on a light vehicle fleet. Fitting one quality solution can achieve fleet standardisation, reducing inventory and inspection times and improve performance, reliability and safety.

Designed specifically for mining light vehicles, Low profile mounting position, Low EMC output of integral products ensures no radio interference, corrosion resistant aluminium brackets, and auxiliary 2 pin DT Connectors for further user customisation such as additional worklights and/or Buggy Whip.

1) LED Mine Spec Signal Bar Pod

- Content:
- 1 x Black Pod*
 - 2 x Stop/Tail light*
 - 1 x Broadband Reverse Alarm*
 - 1 x Brackets (9XX 196 289-101)
 - 1 x K-LED Beacon*
 - 2 x Turn signal light
 - 1 x Reverse indication light*
 - 1 x External Harness (8KB 196 292-011)

2SD 196 293-001

* The accessories are pre-assembled

2) LED Mine Spec Signal Bar Kit

- Content:
- 1 x Mine Spec Signal Bar Kit 2SD 196 293-001
 - 1 x Roof Rack Kit*
 - 4 x Sliders (8XX 196 291-001)

To suit all Toyota Hilu x 4 Door Dual Cab models (MY2006 onwards) **2SD 012 074-001**

To suit FORD Ranger 4 Door PX Dual cab models (MY2012 onwards) **2SD 012 074-101**

* Note: Roof Rack and Brackets are not pre-assembled as shown in picture

This LED product has the following features

DuraLED 700 Lumen Service Light

Light output (measured): 700 lumen, power requirement: 9 Watt, Multivolt™, reverse polarity protection, over-voltage protection, thermal management, clear UV, impact and chemical resistant Grilamid® lens, IP 6K6 / IP 6K7 (high pressure cleaning resistant / submersible), RCM compliance, with 2.5 m cable and surface mount.

| | |
|-----------------------------|------------------------|
| 1) Close range illumination | 2JA 959 037-221 |
| 2) Long range illumination | 2JA 959 037-421 |
| 3) Spot illumination | 2JA 959 037-321 |

**MotoVox Compact 117 dB Horn**

Solid state electronic horn designed for extremely long life and to replace high maintenance electromechanical horns. This model is designed to meet or exceed all applicable SAE specifications. Used by major OEMs.

117 db @ 1.2 m
SAE J1105 Sept 89, Type K.
U.L. recognised for electric vehicles and fork lifts

12–24 VDC, bare wire connection

3TA 910 156-021

**MotoVox Forward 117 dB Horn**

Electronic forward horn is designed to be used where a high-decibel rugged horn is necessary.

117 db @ 1.2 m
SAE J1105 Sept 89, Type J @ 24 V systems
SAE J1105 Sept 89, Type K @ 12 V systems

12–24 VDC, bare wire connection

3TA 910 156-011

**MotoVox Compact 107 dB Horn**

Solid state electronic horn designed for extremely long life and to replace high maintenance electromechanical horns. This model is designed to meet or exceed all applicable SAE specifications. Used by major OEMs.

107 db @ 1.2 m
SAE J1105 Sept 89, Type L

12–48 VDC, bare wire connection

3TA 910 156-001

**RetroVox Self Adjusting Reversing Alarm**

Steel housing and construction for rugged applications. Integral bracket includes same mounting pattern with OEMs, self adjusting. Suitable for high pressure washing, epoxy encapsulated circuit board protects alarm against moisture and vibration damage.

87–112 db @ 1.2 m
SAE J994 Type D

12–24 VDC, bare wire connection

3TA 910 174-031

RetroVox Ultra Heavy Duty Reversing Alarm

One of the most rugged adjustable, Heavy Duty alarms on the market. These alarms are designed to withstand the most punishing environments. They have 8–32 UNC terminal studs on the back of the unit. Used by major OEMs.

97, 107, 112 db @ 1.2 m
SAE J994 Types A, B and C

12–36 VDC, bare wire connection

3TA 910 174-001

RetroVox Compact Broadband 87 dB Alarm

Noise pollution can be an issue for mine sites close to residential areas. HELLA have introduced a range of broadband or “white noise” reversing alarms to prevent miners from having to compromise on safety. By emitting sound over a large range of frequencies, the sound dissipates faster and is localised so that sound doesn’t carry. The RetroVOX features a rugged design, which is highly reliable and unaffected by continuous vibration, moisture, heat, cold, sun glare and dirt.*

87 db @ 1.2 m
SAE J994 class E 11
CE and EMC approved

12–24 VDC, bare wire connection

3SL 910 344-001

RetroVox Compact Broadband 87–112 dB Reversing Alarm

Noise pollution can be an issue for mine sites close to residential areas. HELLA have introduced a range of broadband or “white noise” reversing alarms to prevent miners from having to compromise on safety. By emitting sound over a large range of frequencies, the sound dissipates faster and is localised so that sound doesn’t carry. The RetroVOX features a rugged design, which is highly reliable and unaffected by continuous vibration, moisture, heat, cold, sun glare and dirt.*

87–112 dB @ 1.2 m

12–24 VDC, bare wire connection

3TA 910 174-241

This LED product has the following features

HELLA Mine E-Stop

HELLA Mining's new Mine E-Stop. Versatility, Safety, Fast Installation. This Heavy Duty unit features LED illumination visible from 3 sides, user-friendly 60 mm push button, DT connection and direct mount capability.

Fast Installation: Most E-Stops need dismantling to be fitted however the HELLA Mine E-Stop mounts directly, saving time on initial installation and damage replacement.

Features and benefits:
Added safety through illumination via LED (visible from 3 sides), IP 6K9 und IP 6K8 rated, all units pressure tested, fully sealed unit, "Plug and Play", supplied with mating DT Connector, high visibility yellow powder-coated 304 stainless steel, user friendly, large 60 mm mushroom button, 2 normally closed and 1 normally open contacts (rated 10 A each).

| Buggy whip, spring | 9KX 910 084-081 |

Weatherproof Changeover Relay and Connector Assembly Kits

Dustproof IP 54 to IEC 529 with mounting bracket, weight 35 g, terminals tin plated ISO 8092-1 ambient, shock resistance: 20 G, drop test: 1 Metre onto concrete max, flammability: exceeds UL94-HB, overload current: 240 A for 1 second, 140 A for 5 seconds, 80 A for 40 seconds, 54 A for 1,800 seconds.

| | |
|------|-----------------|
| 12 V | 8KW 910 182-001 |
| 24 V | 8KW 910 182-011 |

Jump Start System

Heavy Duty, high capacity jump-start connectors for vehicles and equipment. Ideal for use where access to terminals is restricted or dangerous. Eliminates chance of cross polarity connections through the specially shaped plug.

Reduces chance of sparking and possible ignition of flammable materials. Mounting bracket, protective cap, and kit containing the terminal, bracket and cap are also available.

Jump Start Plug

Jump Start Plug – high impact ABS plastic.
Copper (silver brass coated) terminals.
Suitable for 70 mm² cable. Connection via crimping and soldering process.

8JA 177 305-101

Jump Start Terminal

| | |
|---|------------------------|
| 1) Jump start Terminal Removes risk of terminal crossing, high impact ABS plastic, zinc coated terminals. | 8JB 177 305-001 |
| 2) Terminal Kit Kit of jump start terminal, bracket and cap. | 8HG 177 305-031 |
| 3) Terminal Bracket Bracket for mounting jump start terminal to vehicle body. | 8HG 177 305-021 |
| 4) Terminal Cap Cap to protect terminal from external environment when not in use. | 9HD 177 305-011 |

Battery Master Lockout Switches

The Battery Lockout Switch provides a reliable power disconnection and safety cut-off that protects the vehicle against tampering, theft and battery drain. It also protects service personnel from electrical hazards during service operations.

Composite-engineered polymer housing that will not corrode. 300 A continuous current rating at 12 V and 250 A at 24 V. Temperature operating range -40°C to +85°C. Divider on base prevents accidental shorting of battery cables. Easy to read designations on bezel and 90° switch travel make it easy to identify switch position.

| | |
|-------------------------------|------------------------|
| Lockout Switch, Red Handle | 9MK 910 109-001 |
| Lockout Switch, Yellow Handle | 9MK 910 109-011 |

Battery Master Lockout Switches

Battery lockout switches provide a reliable power disconnection and safety cutoff that protects the vehicle against tampering, theft and battery drain. It also protects personnel from electrical hazards during service operations. The 4 Pole 9MK 910 109-201 allows isolation of both positive and negative sides from the battery, or isolation of 2 circuits with only one switch.

125 Amps at 6-36V DC Continuous (9MK 910 109-201), 300 Amps at 6-36 V DC Continuous (9MK 910 109-101/111), operating temperature -40°C to +29°C, silver environment contact surfaces, brass electrical contact surfaces, 45 degree switch travel, UL listed, suits panel thickness up to 6.5 mm.

| | |
|--|------------------------|

CONSTRUCTION AND MEANING OF THE IP (INGRESS PROTECTION) CODE

The specification of a degree of protection for protection against access and foreign object includes all lower degrees of protection.

The degrees of protection 1 to 6K for protection against water include all the lower degrees of protection.

Due to different physical affects, this does not automatically have to apply to water protection grades 7, 8 and 9K.

Code letters
(Ingress Protection)

First characteristic numeral
(Numerals 0 to 6 or letter X)

Second characteristic numeral
(Numerals 0 to 8 or letter X)

Additional letter (optional)
(Letters A, B, C, D)

Supplementary letter (optional)
(Letters M, S)
(Letter K)

| Element | Numeral / letter | Meaning for the protection of electrical equipment | Meaning for the protection of persons |
|---|------------------|---|---|
| First characteristic numeral / supplementary letter | 0 | Against the ingress of solid foreign objects (including dust): Not protected | Against access to hazardous parts (unless described by extra letters): Not protected |
| | 1 | With $\varnothing \geq 50$ mm | With back of hand |
| | 2 | With $\varnothing \geq 50$ mm | With finger |
| | 3 | With $\varnothing \geq 50$ mm | With tool |
| | 4 | With $\varnothing \geq 50$ mm | With wire |
| | 5K | Dust-protected | With wire |
| | 6K | Dust-tight | With wire |
| Second characteristic numeral / supplementary letter | 0 | Against the ingress of water: Not protected | |
| | 1 | Vertical dripping | |
| | 2 | Dripping (inclined 15°) | |
| | 3 | Spraying | |
| | 4 | Splashing | |
| | 4K | Same with increased pressure | |
| | 5 | Jetting | |
| | 6 | Powerful jetting | |
| | 6K | Same at increased pressure | |
| | 7 | Temporary immersion | |
| | 8 | Continuous immersion | |
| | 9K | High-pressure / steam jet cleaning | |
| Additional letter (optional) | | Meaning for the protection of electrical equipment | Against access to hazardous parts (unless described by first characteristic numeral): |
| | A | | With back of hand |
| | B | | With finger |
| | C | | With tool |
| | D | | With wire |
| Supplementary letter (optional) | M | Movement of moving parts during water test | |
| | S | Standstill of moving parts during water test | |
| | K | Specifically for the electrical equipment in road vehicles | |

ICON EXPLANATION

Vehicle electrical system voltage

Defines the voltage supply of the light.

Multivolt™ is the most flexible: Requires fewer versions, but has more electronic circuit components and is therefore more expensive.

Dust and water protection IP

International Protection (IP) as per DIN 40050, Part 9. Specific definition for road vehicles.

5K = Dust protected

6K = Dust tight

9K = Protection against water during pressure / steam cleaning.

The higher the protective category, the better the protection against penetrating media. IP 67 maximum value.
→ Completely sealed against dust and water.

Electronic circuit

Basically, two different circuits are possible for LED lamps:

Active:

LED current regulation by means of active electronics.

Higher expenditure during development because of complex circuit and necessary EMC approval. Higher price because of electronic components, but electronic current regulation allows for maximum LED service life.

Passive:

Setting a specific voltage range for the LED by means of a series resistor. Inexpensive solution without complex protection measures. No EMC approval required.

Passive

Thermal management

Active:

Electronic power control of the LED in case of impermissibly high ambient temperatures. This ensures the protection of the LED against destruction by overheating. More development overhead with active thermal management and higher parts prices ensure optimal conditions for maximum design life.

Active

Passive

Optimised layout of the components for even temperature distribution and spread. The warmer the LED gets through exterior factors or heating caused by its own operation, the shorter the service life.

Passive

Rated shock resistance

Operational duty cycles in mining are some of the most demanding, and field research by HELLA has measured shock and vibration levels of remarkable magnitudes. Equipment designed for less demanding environments will fail rapidly when used in mining, and often when most needed. Our design aim is to produce equipment that will function reliably in a continuously shock and vibration laden environment.

Draco® Dampening

Draco® Dampening systems greatly reduce the vibration and shock forces that are consistently experienced on mining vehicles. The system provides a non-rigid mounting arrangement between the vibration source (the mining machine) and load (the light fitting), ensuring greater product lifespan and reduced servicing intervals.

Approval for transport of dangerous goods

Light approved for transport of dangerous goods according to Hazardous Waste Road Directive (GGVS).

Generally required for lorry and trailer lighting. Pre-conditioned for approval: damage to the light source must not cause explosive media to ignite.

Transient spike protection

In some circumstances, the electrical system of mining vehicles can experience sudden high voltage spikes which have the potential to destroy sensitive electronic equipment, such as lighting. Products marked with this symbol ensures there is adequate protection from these instances.

Supplement to the electronics for protecting the LEDs against high voltages / currents in the vehicle electrical system as per ISO 7637-2.

Overloading of the LEDs can be caused by voltage peaks in the vehicle because of:

- Jump-starting
- Devector control units
- Load-Dump Impulse (incorrect battery contact)

They stress / damage the LEDs, which can cause the function to fail or the service life to be reduced. Adding additional components to the circuit protects the circuit and can extend the service life or even prevent an outage.

Operating Temperature

Whether it's in cold or warm climates, our products have to perform every time. Thermal management and a well designed housing allows full function of our products in all operating conditions. To ensure this performance we test our products from -40°C up to 100°C.

ICON EXPLANATION

Signal light beacons

Flashing signal light

Rotating signal light

Steady On signal light

Electrical Compliance

Electrical Compliance

Polarity reversal protection

Even if the connecting cable is connected the wrong way round, there is still no danger for the electronics. The semiconductor in an LED must always be operated with the correct polarity. Inverse polarity damages the LED, so that LED lamps are always equipped with a reverse polarity protection (diode).

This function only works when "+" and "-" are correctly connected, however. If a lamp has a bi-polar circuit, the functioning is independent of the contact connections. This ensures Poka-yoke (avoiding faulty installations) in connection with the indentation clamping technology, for instance.

Electromagnetic compatibility

Electromagnetic compatibility (EMC) tested.

If the lamp has not been built to EMC specifications, and is thus not certified, interactions that impair other safety-relevant electronic systems may occur.

Examples:
Interference in the radio loudspeaker, impairment of ABS electronics, or failure of the lamp due to sensitivity to interference.

Corrosion Proof Housing

Corrosion Proof Housing means new extreme corrosion resistant worklights with a special housing to improve the resistance of our Mining worklights in harsh conditions.

Approval

Product is licensed according to ECE guidelines.

Product is licensed according to RCM guidelines.

From 2013, Products marketed in Australia and New Zealand will share a common electrical safety standard. As part of the registration process, suppliers must make a declaration that all the equipment they sell meets relevant standards and is electrically safe. The RCM mark will eventually supercede the C-Tick and A-Tick marks.

Product is licensed according to SABS guidelines.

Product is licensed according to SAE guidelines.

RFCommSafe™ Electromagnetic Compatibility (EMC)

Every LED lamp contains electronic circuitry. It is essential that this circuitry does not cause harmful interference to other devices and at the same time is not susceptible to radiation from other devices.

RFCommSafe™ products were developed in recognition that some radio communication equipment can self-tune to be very sensitive in remote areas. In these situations the limits prescribed by regulatory requirements and as defined in international standards such as CISPR15 or relevant UNECE Standards may not be sufficient to ensure there is no interference with very sensitive radio communication equipment.

ZeroGlare™

The ZeroGlare™ light distribution is designed specifically for low beam applications to completely remove glare for oncoming traffic. ZeroGlare™ brings on-road lighting safety and technology to the mine site.

Sea turtle friendly product

Turtles' vision is in a higher frequency range than that of humans. It extends from about 580 nm up into the ultraviolet, peaking in the blue-green. So light at 590 nm and below. Amber is invisible to the turtles.

Sea turtle friendly lights will be used to avoid that hatchlings will walk toward civilisation instead of toward the ocean.
